

I shipped this. Then I audited myself.

Score: **68 / 100**. Dated, public, in the repo.

WHAT I FOUND

- 40% of feature components bypass the design token system.
- Duplicate Button components — one core, one "enhanced."
- Two toast systems running simultaneously.
- Hardcoded color values in nine files instead of one token.

```
5  const classificationData=[
6  {
7    level:"High Confidence",
8    count:61,
9    percentage:55,
10   description:"Match known patterns with high confidence",
11   color:"text-success",
12   bgColor:"bg-success-bg",
13   icon:CheckCircle,
14   progressColor:"bg-success",
15   actionColor:"text-success",
16 },
17 {
18   level:"Medium Confidence",
19   count:42,
20   percentage:34,
21   description:"Somewhat reliable AI classifications",
22   color:"text-warning",
23   bgColor:"bg-warning-bg",
24   icon:AlertCircle,
25   progressColor:"bg-warning",
26   actionColor:"text-warning",
27 },
28 {
29   level:"Low Confidence",
30   count:14,
31   percentage:11,
32   description:"Need manual review due to uncertain patterns",
33   color:"text-error",
34   bgColor:"bg-error-bg",
35   icon:XCircle,
36   progressColor:"bg-error",
37   actionColor:"text-error",
38 },
```
